

# KUUSAMO

LOG HOUSES

We produce wooden houses for our customers and provide the services required for construction planning.

The harsh climate of Northern Finland forces the trees to mature slowly, giving a compact and dense material. This wood has unique structural properties with low moisture content.

We are members of the Polkky group, the most important sawmill in Northern Finland. Our combined turnover is in excess of 113 million Euros.

Our harvest system is based around the principles of sustainable forest management.

Our good relationship and long term cooperation with the local forest owners ensures a plentiful supply of raw material.
